

Adhesive Recommendation for Impervio Glue Down Installation

Impervio™ products are intended to be installed using the floating installation method. However, there are some installations that will need to be glued down due to the type and level of traffic or heavy weighted loads for the best performance of Impervio™ products. This would include heavy loads that are rolled or slid on top of the flooring that can disengage or may break the lock due to the extreme lateral pressure causing side or end separation, peaking or gapping, or stationary loads such as cabinets.

Beaulieu Urethane Premium Wood Adhesive (WDAD1 Urethane Prem) is recommended. A 1/8 x 1/8 x 1/8 inches V notch is recommended, this will yield approximately 90-110 square feet per gallon. This is a wet lay application and there must be transfer of the adhesive to the bottom of the flooring.

Please see the Impervio™ general installation instructions for all other requirements for proper installation. Please contact Technical Services at 800-944-2840 or tek.services@beaulieugroup.com for questions.
